Incoming webhooks are a simple way to post messages from external sources into Slack. They make use of normal HTTP requests with a JSON payload, which includes the message and a few other optional details. You can include message attachments to display richly-formatted messages.
Adding incoming webhooks requires a bot user. If your app doesn't have a bot user, we'll add one for you.
Each time your app is installed, a new Webhook URL will be generated.

Incoming webhooks are a simple way to post messages from external sources into Slack. They make use of normal HTTP requests with a JSON payload, which includes the message and a few other optional details. You can include message attachments to display richly-formatted messages.
Adding incoming webhooks requires a bot user. If your app doesn't have a bot user, we'll add one for you.
Each time your app is installed, a new Webhook URL will be generated.
If you deactivate incoming webhooks, new Webhook URLs will not be generated when your app is installed to your team. If you'd like to remove access to existing Webhook URLs, you will need to Revoke All OAuth Tokens.

Webhook URLs for Your Workspace
To dispatch messages with your webhook URL, send your message in JSON as the body of an application/json POST request.
Add this webhook to your workspace below to activate this curl example.
Sample curl request to post to a channel:
curl -X POST -H 'Content-type: application/json' --data '{"text":"Hello, World!"}' YOUR_WEBHOOK_URL_HERE
